

Bluestock Mutual Fund Analytics Platform

Final analytical report generated from the provided 10-dataset capstone bundle.

Executive Summary

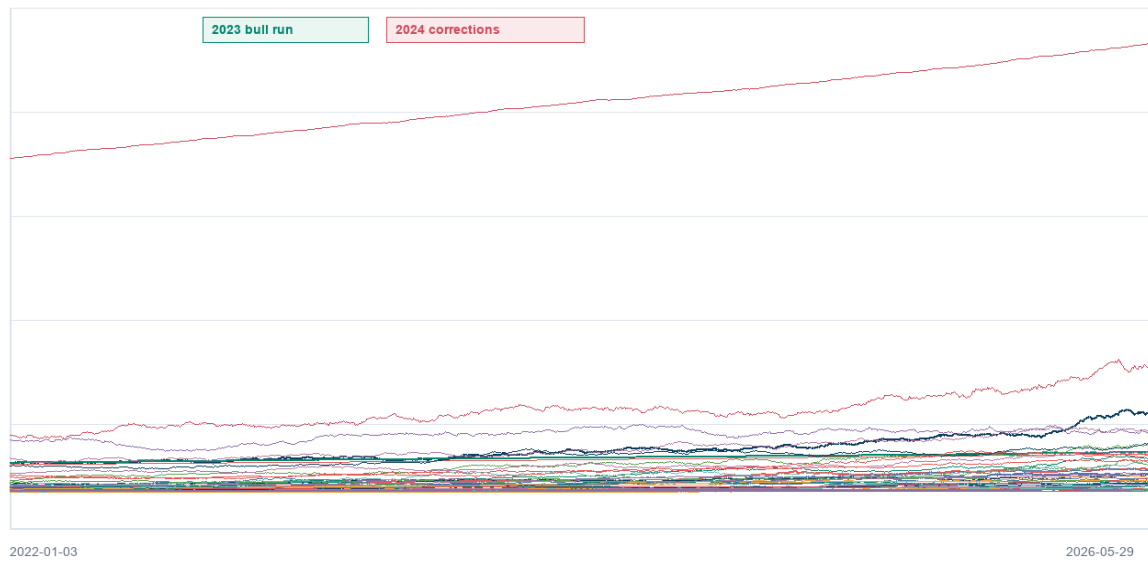

The project now includes a reproducible ETL pipeline, cleaned CSVs, a SQLite star schema, scorecard/risk outputs, report-ready charts, dashboard blueprint, and notebooks. SIP inflows peaked at Rs 31,002 Cr in Dec 2025; SBI Mutual Fund leads latest AMC AUM at 12.50 lakh crore; and Mirae Asset Large Cap Fund - Regular - Growth leads the computed composite scorecard.

Metric	Value
Transactions	32,778
Investors	5,000
Folio growth	13.26 Cr to 26.12 Cr
Top scorecard fund	Mirae Asset Large Cap Fund - Regular - Growth

Finding 1: 01 Nav Trends All Schemes

Daily NAV trends across 40 schemes

Trading-day NAV, Jan 2022-May 2026; bull/correction windows marked for context.

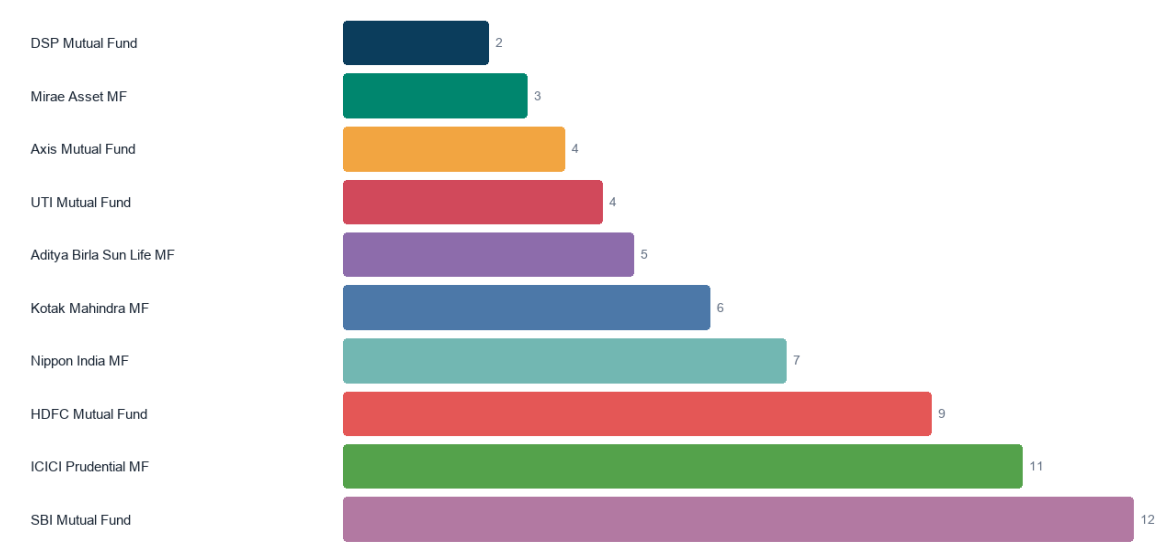

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 2: 02 Aum Growth By Fund House

AMC AUM dominance at latest year-end

AUM in lakh crore INR; SBI remains the largest AMC in the sample.

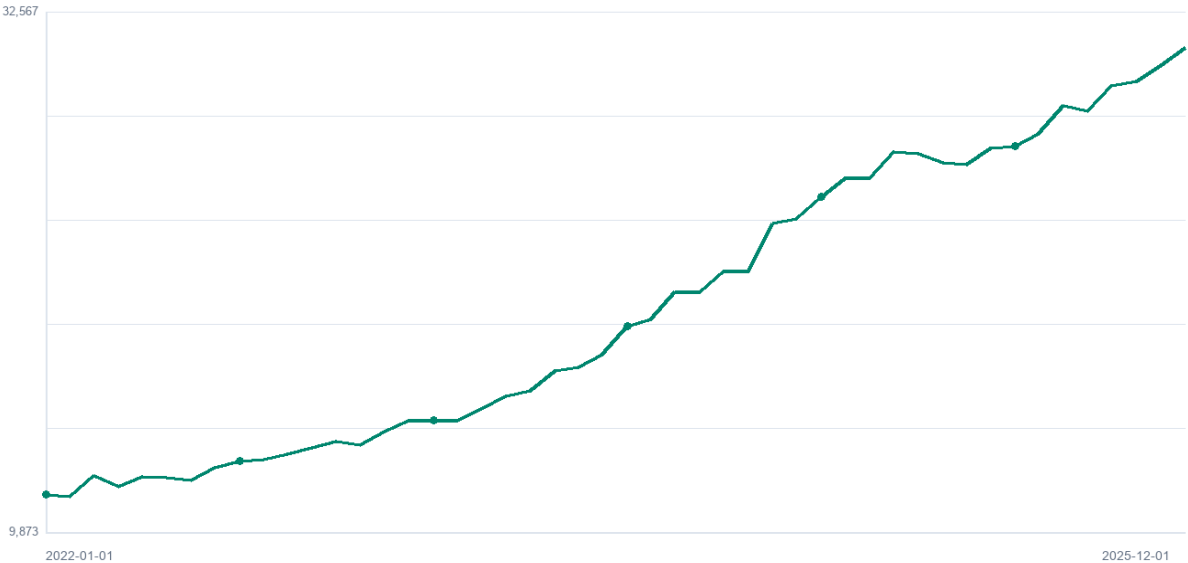

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 3: 03 Sip Inflow Time Series

Monthly SIP inflows reached a new high

SIP inflow in crore INR, Jan 2022-Dec 2025.

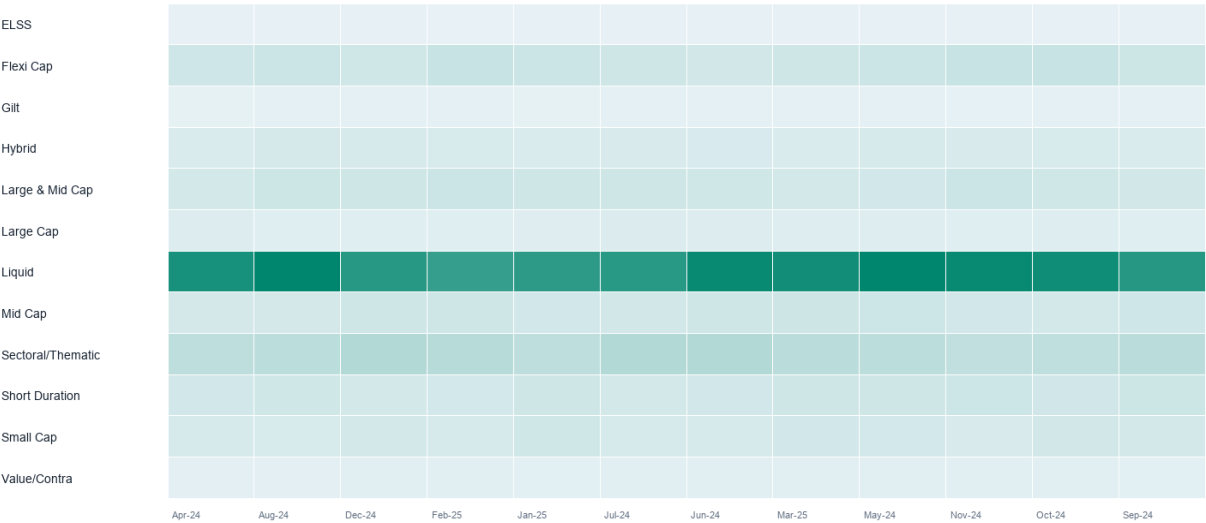

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 4: 04 Category Inflow Heatmap

Category inflow heatmap

Net inflow by category, FY25 monthly view in crore INR.

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 5: 08 Sip Amount By State

SIP amount by state

Total SIP amount in INR across transaction sample.

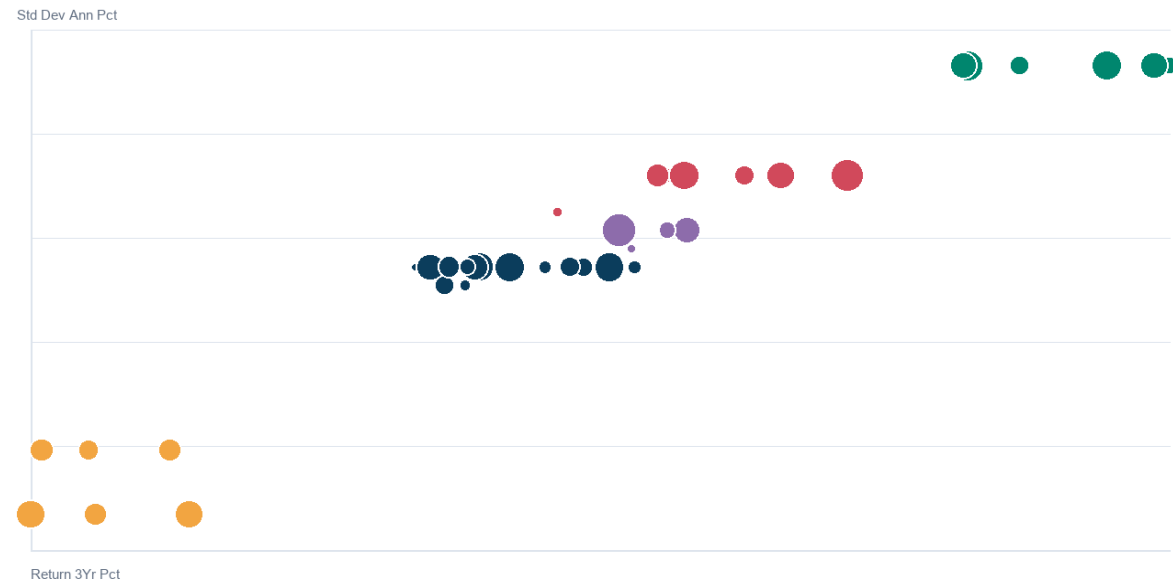

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 6: 15 Fund Risk Return Scatter

Risk-return scatter

3Y return vs annualized standard deviation; bubble size is AUM.

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 7: 16 Top Funds By Sharpe

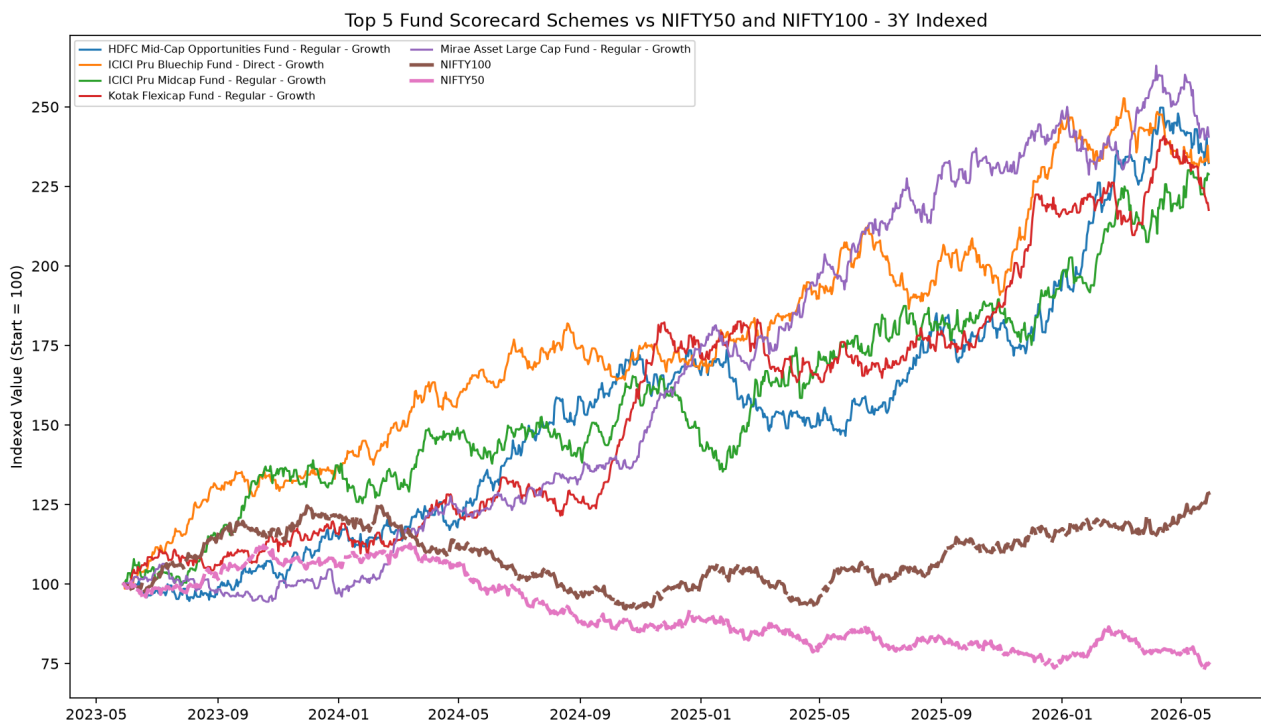

Top funds by computed Sharpe

Sharpe uses 6.5% annual risk-free-rate proxy.

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 8: Benchmark Comparison Chart

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 9: 18 Var 95 Bar

Highest historical 95% VaR

Absolute daily VaR magnitude; higher means deeper downside threshold.

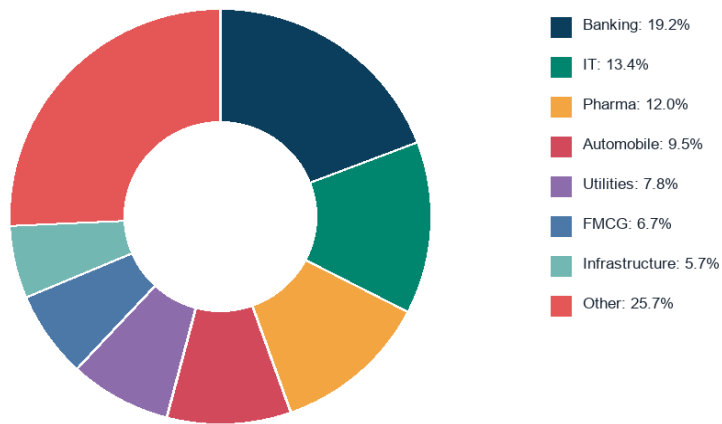

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Finding 10: 14 Sector Allocation Donut

Aggregate sector allocation

Summed sector weights across portfolio holdings.

Interpretation: this visual supports the report narrative and can be reused in the Power BI page exports, final deck, or GitHub README.

Recommended Next Steps

1. Build the Power BI .pbix from cleaned CSVs or SQLite using the dashboard blueprint. 2. Refresh live NAV through mfapi.in when network access is available. 3. Add older NAV history for a fully computed 5-year CAGR. 4. Record a walkthrough showing ETL, scorecard, and dashboard pages.

Caveats And Assumptions

This project is for educational analytics only. Processed NAV is calendar-filled for continuity; trading-day returns should use source trading days. Investor transaction data is a project sample and should not be generalized as the entire Indian mutual fund market.
